NRC Brief to the Senate Special Committee
on Science Policy

Senator Lamontagne has asked all federal departments and agencies involved in science and technology to submit to his Special Committee of the Senate briefs outlining their activities, with special attention to achievements and changes which have taken place since their last report (circa 1968). Much of the information for the NRC report will be provided centrally. Nevertheless, the Divisions have been asked to supply the extensive detailed information needed for the portion of the report which will deal with the NRC Laboratories.

I have asked Dr. R. Martineau to collate the information required from the Herzberg Institute. Although much of this information is at hand, it is inevitable that he will have to contact individual Sections for confirmation or additional material. Since time allowed for preparation of the NRC brief is short you can expect Dr. Martineau to be in touch with you within the next few days. It would be appreciated if he can count on your assistance.
